# The letltxmacro package

### Heiko Oberdiek <oberdiek@uni-freiburg.de>

### 2008/06/24 v1.3

#### Abstract

TeX's **\let** assignment does not work for LATeX macros with optional arguments or for macros that are defined as robust macros by **\DeclareRobustCommand**. This package defines **\LetLtxMacro** that also takes care of the involved internal macros.

### 1 Documentation

If someone wants to redefine a macro with using the old meaning, then one method is  $T_EX$ 's command  $\$ 

```
\newcommand{\Macro}{\typeout{Test Macro}}
\let\SavedMacro=\Macro
\renewcommand{\Macro}{%
  \typeout{Begin}%
  \SavedMacro
  \typeout{End}%
}
```

However, this method fails, if \Macro is defined by \DeclareRobustCommand and/or has an optional argument. In both cases LATEX defines an additional internal macro that is forgotten in the simple \let assignment of the example above.

```
\LetLtxMacro \{\langle new \ macro \rangle\}\ \{\langle old \ macro \rangle\}
```

Macro LetLtxMacro behaves similar to  $T_EX$ 's let assignment, but it takes care of macros that are defined by LeclareRobustCommand and/or have optional arguments. Example:

```
\DeclareRobustCommand{\Macro}[1][default]{...}
\LetLtxMacro{\SavedMacro}{\Macro}
```

Then macro \SavedMacro only uses internal macro names that are derived from \SavedMacro's macro name. Macro \Macro can now be redefined without affecting \SavedMacro.

#### 1.1 Supported macro definition commands

| \newcommand, \renewcommand         | latex/base               |
|------------------------------------|--------------------------|
| \newenvironment, \renewenvironment | latex/base               |
| \DeclareRobustCommand              | latex/base               |
| \newrobustcmd, \renewrobustcmd     | etoolbox                 |
| \robustify                         | etoolbox 2008/06/22 v1.6 |

# 2 Implementation

#### 2.1 Show cases

#### 2.1.1 letltxmacro-showcases.tex

```
1 (*showcases)
2 \NeedsTeXFormat{LaTeX2e}
3 \makeatletter
```

\Line The result is displayed by macro \Line. The percent symbol at line start allows easy grepping and inserting into the DTX file.

```
4 \newcommand*{\Line}[1]{%
   \typeout{\@percentchar#1}%
6 }
7 \newcommand*{\ShowCmdName}[1]{%
    \@ifundefined{#1}{}{%
9
        \space\space(\expandafter\string\csname#1\endcsname) = %
10
11
        (\expandafter\meaning\csname#1\endcsname)%
12
      }%
13
    }%
14 }
15 \newcommand*{\ShowCmds}[1]{\%
    \ShowCmdName{#1}%
16
    \ShowCmdName{#1 }%
17
    \ShowCmdName{\\#1}%
```

```
\ShowCmdName{\\#1 }%

#### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

CTAN:macros/latex/contrib/oberdiek/letltxmacro.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/letltxmacro.pdf Documentation.

**Bundle.** All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

```
CTAN: install/macros/latex/contrib/oberdiek.tds.zip
```

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

### 4.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

#### 4.3 Package installation

**Unpacking.** The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain-TeX:

```
{\tt tex\ letltxmacro.dtx}
```

 $<sup>^{1} {\</sup>tt ftp://ftp.ctan.org/tex-archive/}$ 

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

#### 4.4 Refresh file name databases

If your  $T_EX$  distribution (te $T_EX$ , mik $T_EX$ , ...) relies on file name databases, you must refresh these. For example, te $T_EX$  users run texhash or mktexlsr.

#### 4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the .dtx source file. It can be extracted by AcrobatReader 6 or higher. Another option is pdftk, e.g. unpack the file into the current directory:

```
pdftk letltxmacro.pdf unpack_files output .
```

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain-T<sub>E</sub>X: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{letltxmacro.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfLATEX:

```
pdflatex letltxmacro.dtx
makeindex -s gind.ist letltxmacro.idx
pdflatex letltxmacro.dtx
makeindex -s gind.ist letltxmacro.idx
pdflatex letltxmacro.dtx
```

### 5 History

[2008/06/09 v1.0]

• First version.

# [2008/06/12 v1.1]

• Support for etoolbox's \newrobustcmd added.

# [2008/06/13 v1.2]

• Support for etoolbox's \robustify added.

### [2008/06/24 v1.3]

• Test file adapted for etoolbox 2008/06/22 v1.6.

### 6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.

| $\mathbf{Symbols}$                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 90, 92, 230, 239, 249, 250, 251,                                                       |
