The **pdfcolfoot** package

Heiko Oberdiek

<oberdiek@uni-freiburg.de>

2007/09/09 v1.1

Abstract

Since version 1.40 pdfTeX supports several color stacks. This package uses a separate color stack for footnotes that can break across pages.

Contents

1 User interface

Just load the package:

```
\usepackage{pdfcolfoot}
```

The package assigns a color stack for footnotes and patches the appropriate internal macros to support this color stack.

1.1 Other packages or classes

This package pdfcolfoot redefines `\@makecol` and `\@makefntext`. This can cause conflicts if other packages or classes also change these macro in an incompatible way. Sometimes it can help to change the package order.

2 Interface for package or class writers

Two macros `\pdfcolfoot@switch` and `\pdfcolfoot@current` need to be added to get support of the color stack for footnotes. This package pdfcolfoot already patches many macros to add these two macros. If a package or class that deals with `\@makefntext` or `\@makecol` is not recognized by this package, the package/class author can add these two macros in his package/class.

2.1 Macro `\pdfcolfoot@switch`

Color commands inside footnotes should use the special color stack for footnotes. Macro `\pdfcolfoot@switch` sets this special color stack. (It can be called several times). But caution, footnotes for minipages should not be affected. This package patches `\@makefntext` for this purpose.

2.2 Macro `\pdfcolfoot@current`

In LaTeX the footnote stuff goes into box `\footins` that is placed on the page (`\@makecol`). Two things need consideration:

- The footnote area should not interfere with the normal color stack. Macro `\normalcolor` inside a group helps it stores the current color of the normal stack and restores it after the group.

- If a footnote is broken across a page boundary, we need the latest color of the footnote area in the previous page. This is set by macro `\pdfcolfoot@current`.

As example the changes for `\@makecol` are shown (however this macro is already patched by this package):

```
\gdef\@makcol{%
  ...
  \setbox\@outputbox\vbox{% or similar
    ...
    \color@begingroup
      \normalcolor
      \footnoterule % using normal color (black)
      \csname pdfcolfoot@current\endcsname
      \unvbox\footins
    \color@endgroup
  }%
  ...
}
```

We use `\csname` to call macro `\pdfcolfoot@current`. If package pdfcolfoot is not loaded, `\pdfcolfoot@current` is not defined. In this case `\csname` defines the undefined macro with meaning `\relax` and we do not get an error because of undefined command.

3 Implementation

3.1 Identification

```
1 ⟨*package⟩
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{pdfcolfoot}%
4   [2007/09/09 v1.1 pdfTeX's color stack for footnotes (HO)]%
```

3.2   Load package **pdfcol**

```
5 \RequirePackage{pdfcol}[2007/09/09]
6 \ifpdfcolAvailable
7 \else
8   \PackageInfo{pdfcolfoot}{%
9     Loading aborted, because color stacks are not available%
10  }%
11  \expandafter\endinput
12 \fi
```

3.3   Color stack for footnotes

Version 1.0 has used \current@color as initial color stack value, since version 1.1
package pdfcol with its default setting is used.

```
13 \pdfcolInitStack{foot}
```

3.4   Patch \@makefntext

\pdfcolfoot@switch   Macro \pdfcolfoot@switch switches the color stack. Subsequent color calls uses
the color stack for footnotes.

```
14 \newcommand*{\pdfcolfoot@switch}{%
15   \pdfcolSwitchStack{foot}%
16 }
```

```
17 \AtBeginDocument{%
18   \newcommand*{\pdfcolfoot@makefntext}{}%
19   \let\pdfcolfoot@makefntext\@makefntext
20   \renewcommand{\@makefntext}[1]{%
21     \pdfcolfoot@makefntext{%
22       \if@minipage
23       \else
24         \pdfcolfoot@switch
25       \fi
26       #1%
27     }%
28   }%
29 }
```

3.5   Patch \@makecol

\pdfcolfoot@current   When the footnote area starts, the color should continue with the latest color
value of the previous footnote area. This color is available on the current top of
the color stack.

```
30 \newcommand*{\pdfcolfoot@current}{%
31   \pdfcolSetCurrent{foot}%
32 }
```

For convenience we use \detokenize for patching \@makecol and related
macros.

```
33 \begingroup\expandafter\expandafter\expandafter\endgroup
34 \expandafter\ifx\csname detokenize\endcsname\relax
35   \PackageWarningNoLine{pdfcolfoot}{%
36     Missing e-TeX for patching \string\@makecol
37   }%
38   \expandafter\endinput
39 \fi
```

3

```
40 \newif\ifPCF@result
41 \def\pdfcolfoot@patch#1{%
42   \ifx#1\@undefined
43   \else
44     \ifx#1\relax

```

5 Installation

5.1 Download

Package.   This package is available on CTAN[1]:

CTAN:macros/latex/contrib/oberdiek/pdfcolfoot.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/pdfcolfoot.pdf Documentation.

Bundle.   All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TeX Files" (CTAN:tds/tds.pdf). Directories with `texmf` in their name are usually organized this way.

5.2 Bundle installation

Unpacking.   Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

    unzip oberdiek.tds.zip -d ~/texmf

Script installation.   Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package **attachfile2** comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

    chmod +x scripts/oberdiek/pdfatfi.pl
    cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/

5.3 Package installation

Unpacking.   The `.dtx` file is a self-extracting **docstrip** archive. The files are extracted by running the `.dtx` through plain-TeX:

    tex pdfcolfoot.dtx

---

[1]ftp://ftp.ctan.org/tex-archive/

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
pdfcolfoot.sty            → tex/latex/oberdiek/pdfcolfoot.sty
pdfcolfoot.pdf            → doc/latex/oberdiek/pdfcolfoot.pdf
test/pdfcolfoot-test1.tex → doc/latex/oberdiek/test/pdfcolfoot-test1.tex
pdfcolfoot.dtx            → source/latex/oberdiek/pdfcolfoot.dtx
```

If you have a `docstrip.cfg` that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

5.4 Refresh file name databases

If your TeX distribution (teTeX, mikTeX, . . .) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

5.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is pdftk, e.g. unpack the file into the current directory:

```
pdftk pdfcolfoot.pdf unpack_files output .
```

Unpacking with LaTeX. The `.dtx` chooses its action depending on the format:

plain-TeX: Run docstrip and extract the files.

LaTeX: Generate the documentation.

If you insist on using LaTeX for docstrip (really, docstrip does not need LaTeX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pdfcolfoot.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfLaTeX:

```
pdflatex pdfcolfoot.dtx
makeindex -s gind.ist pdfcolfoot.idx
pdflatex pdfcolfoot.dtx
makeindex -s gind.ist pdfcolfoot.idx
pdflatex pdfcolfoot.dtx
```
