Generating the index and chage log for the Babel system

Johannes Braams

2004/02/19

1 Description

This file contains the source for the style files for the `MakeIndex` program. These are needed to produce the index for the complete source listing and to produce the listing of the changes.

2 The index and the list of changes

Most of the entries are the same as in the files `gind.ist` and `gglo.ist` from the doc package.

```
 1 ⟨∗idx | glo⟩
 2 actual '='
 3 quote '!'
 4 level '>'
 5 ⟨/idx | glo⟩
```

Because the babel system consists of so many files the default codeline numbering scheme of the doc package has been adapted. The line numbers consist of two parts seperated with a dot. This has to made known to the `MakeIndex` program when it produces the index.

```
 6 ⟨+idx⟩page_compositor "."
```

Any further entries are again copied from `gind.ist` and `gglo.ist`.

```
 7 ⟨∗idx⟩
 8 preamble
 9 "\n \\begin{theindex} \n \\makeatletter\\scan@allowedfalse\n"
10 postamble
11 "\n\n \\end{theindex}\n"
12 ⟨/idx⟩
13 ⟨∗glo⟩
14 preamble
15 "\n \\begin{theglossary} \n
16     \\makeatletter\\scan@allowedfalse\n"
17 postamble
18 "\n\n \\end{theglossary}\n"
19 keyword "\\glossaryentry"
20 ⟨/glo⟩
21 ⟨+idx | glo⟩item_x1    "\\efill \n \\subitem "
22 ⟨+idx⟩item_x2    "\\efill \n \\subsubitem "
23 ⟨+glo⟩item_x2    "\\ "
24 ⟨∗idx | glo⟩
25 delim_0    "\\pfill "
26 delim_1    "\\pfill "
27 delim_2    "\\pfill "
28 % The next lines will produce some warnings when
29 % running Makeindex as they try to cover two different
```

```
30 % versions of the program:
31 lethead_prefix   "{\\bfseries\\hfil "
32 lethead_suffix   "\\hfil}\\nopagebreak\n"
33 ⟨/idx | glo⟩
34 ⟨+idx⟩lethead_flag        1
35 ⟨+glo⟩lethead_flag        0
36 ⟨∗idx | glo⟩
37 heading_prefix   "{\\bfseries\\hfil "
38 heading_suffix   "\\hfil}\\nopagebreak\n"
39 ⟨/idx | glo⟩
40 ⟨+idx⟩headings_flag        1
41 ⟨+glo⟩headings_flag        0
```
